

FACTS & INFORMATION

FEBRUARY 2017

The Water Conservation Area 3 (WCA-3) Decompartmentalization (Decomp) and Sheetflow Enhancement Physical Model (DPM) is a field test that is being conducted along a 3,000-foot stretch of the L-67A and L-67C levees and canals in WCA-3A and 3B. The field testing will provide scientific information to support formulation and design for future decompartmentalization of WCA-3, as visualized in the Comprehensive Everglades Restoration Plan (CERP).

The DPM is designed to address scientific, water flow and water management uncertainties that require clarification prior to future planning and construction of Everglades restoration projects, authorized in the Water Resources Development Act of 2000.

PROJECT LOCATION

The DPM is located in Miami-Dade County along the southern end of the L-67A and L-67C canals within Water Conservation Area 3 (WCA-3).

PROJECT COMPONENTS

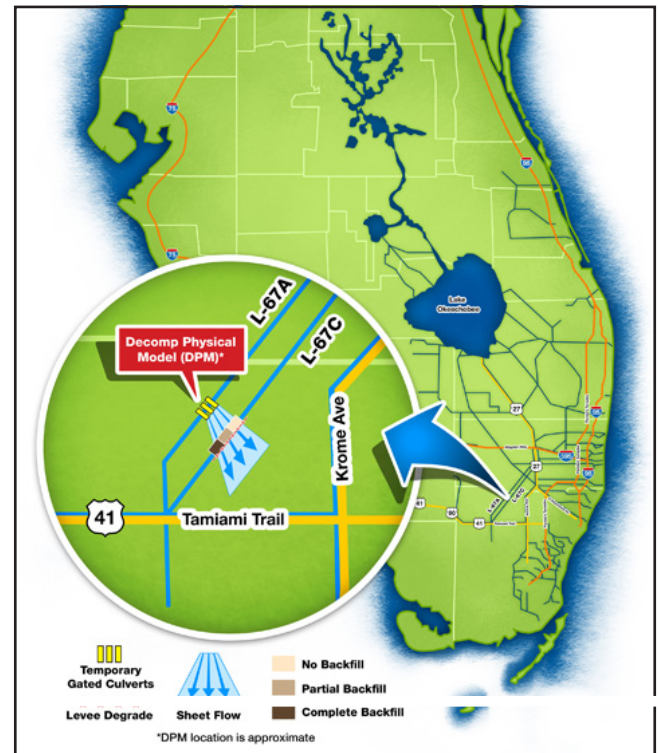

This project provides for the temporary installation and testing of the following DPM features:

- Ten 60-inch culverts in L-67A Levee (S-152).
- A 3,000-foot gap in the L-67C Levee with three 1,000-foot backfill treatments; no backfill, partial backfill and complete backfill using adjacent levee material.
- The S-152 structure has a maximum combined flow of 750 cubic feet per second (cfs), with velocities up to 3 centimeters per second to allow for pulse releases between the L-67A and L-67C levees toward the various backfill treatments in the L-67C gap.
- De-construction will occur at the end of DPM testing period and the project area will be restored to pre-DPM conditions.

PROJECT STATUS

Installation of the DPM was completed in October 2013. Three operational testing periods have been conducted within the November through January timeframe in 2013, 2014 and 2015. The fourth operational testing period is currently under way, with additional testing tentatively planned through 2019.

Access through the L-67A canal will remain open during and after installation. Access through the northern portion of L-67C will be blocked until the model is decommissioned.
