Environmental Branch

10 APR 2013

To Whom It May Concern:

Pursuant to the National Environmental Policy Act and U.S. Army Corps of Engineers (Corps) Regulation (33 CFR 230.11 and 40 CFR 1501.4(e)1), this letter constitutes the Notice of Availability of the Final Finding of No Significant Impact (FONSI) for the proposed Flood Control and Coastal Emergency (FCCE) P.L. 87-99 Post-Tropical Storm Debby beach renourishment of the Federally authorized Pinellas County Beach Erosion Control project on Treasure Island and Long Key, Pinellas County, FL.

The FONSI (attached) is also available on the Corps, Jacksonville District website at <http://www.saj.usace.army.mil/About/DivisionsOffices/Planning/EnvironmentalBranch/EnvironmentalDocuments.aspx>. If you have any questions or comments, please contact Mr. Paul DeMarco by telephone at 904-232-1897, or by email at Paul.M.DeMarco@usace.army.mil.

Sincerely,

by Eric P. Summa
Chief, Environmental Branch

ATTENTION OF

FINDING OF NO SIGNIFICANT IMPACT

**PINELLAS COUNTY BEACH EROSION CONTROL PROJECT
TREASURE ISLAND AND LONG KEY
PINELLAS COUNTY, FLORIDA**

This Finding incorporates by reference three Environmental Assessments conducted for the proposed beach renourishment of the Federally authorized Pinellas County Beach Erosion Control Project on Treasure Island and Long Key, Pinellas County, FL. The initial Environmental Assessment (EA) was completed in 1997 by the Planning Division (PD) under the Civil Works Project authority and evaluates the placement of dredged sand from the Egmont Shoal offshore borrow area onto the beaches of Pinellas County. A subsequent 2003 EA completed by PD evaluates the Egmont Shoal borrow area as the No Action Alternative for the Pinellas County beach renourishment project. More recently, the PD EA was updated in 2009 to evaluate alternate borrow areas for the same beach renourishment project. Therefore, this Finding provides notice of intent of the U.S. Army Corps of Engineers (Corps) Civil Works Program to include and amend its existing National Environmental Policy Act (NEPA) coverage by incorporating by reference all discussions and conclusions contained in these three EAs. Based on information analyzed in the EAs, reflecting pertinent information obtained from agencies having jurisdiction by law and/or special expertise, I conclude that the proposed action will not significantly impact the quality of the human environment and does not require an Environmental Impact Statement. Reasons for this conclusion are in summary:

- a. The proposed action would be conducted in accordance with the Endangered Species Act, and specifically in compliance with the Gulf Regional Biological Opinion issued by the National Marine Fisheries Service (NMFS) and the Statewide Programmatic Biological Opinion (SPBO) issued by the U.S. Fish and Wildlife Service (USFWS). The work would not jeopardize the continued existence of any threatened or endangered species or adversely modify critical habitat.
- b. This project was coordinated with the State of Florida, and all applicable water quality standards will be met per Joint Coastal Permit (JCP) 0221569-008-JM issued 29 March 2010 and modification 0221569-010-JN dated 20 December 2012.
- c. The State concurred with the Corps Coastal Zone Management Act (CZMA) consistency determination that the proposed action is consistent with the enforceable policies of the Florida Coastal Management Program through issuance of JCP modification 0221569-010-JN.
- d. In accordance with the National Historic Preservation Act, Section 106 consultation is ongoing. The project will have no effects to properties listed on or eligible for listing on the National Register of Historic Places. In addition, the project specifications will include protections for the USS Narcissus underwater archaeological preserve adjacent to the Egmont Shoal borrow area.

e. Public benefits will be provided with hurricane and storm damage reduction and beach recreation.

f. Measures will be in place during construction to eliminate, reduce, or avoid adverse impacts below the threshold of significance to fish and wildlife resources including the following:

1. Dredging would occur within the authorized footprint of the Egmont Shoal borrow area and beach placement would occur within the template of previously permitted and authorized placement areas;
2. All water based activities would follow standard manatee, sea turtle and smalltooth sawfish protection measures and dredged material placement would comply with the conditions of the USFWS SPBO;
3. The Jacksonville District's Migratory Bird Protection Plan would be followed during the nesting season.

In consideration of the information summarized, I find that the proposed Federal beach renourishment project, Treasure Island and Long Key, Pinellas County, FL, will not significantly affect the human environment and does not require an Environmental Impact Statement. A copy of these documents will be made available to the public at the following website:

<http://www.saj.usace.army.mil/About/DivisionsOffices/Planning/EnvironmentalBranch/EnvironmentalDocuments.aspx>.
