Mr. Beter,

I am a resident of Brevard County and frequently come to the Palm Beaches to enjoy the remarkable diving. I am a 27 year old student of our community college, former President of our Environmental Club, and current President of our Student Government. My major field of study is Biological Sciences, with a strong pursuit of Environmental Sciences. I also volunteer for the St. Johns' Water Management District on some of their projects. Hopefully these facts about myself will show you I do have some knowledge of the past projects of the USACE, as well as the environment in general. I am also a Dive Master in training. This allows me to bring several hundred people a year to the Palm Beach County dive sites. With the several hundred people that have found out about the dredging barrow site you have planned, there is a unanimous feeling of disapproval. I am sure you have found this out by responses to several emails put out by Environmental Organizations. I beg you to please leave the reef area alone, and dig from the Peanut Island site, as digging around the coral reefs will cause mass casualties. They do count as casualties since corals are living animals, and part of the massive food web the ocean has.

Thank you,

Billy Fried 321-427-1796
