Streamlining the Process: Using the Supplemental Information for Federal Permitting Form

March 1, 2017, 2-3 pm

The Florida Department of Environmental Protection, Florida's five water management districts, and the US Army Corps of Engineers (Corps) have worked together to create a "Supplemental Information for Federal Permitting" form to be used in conjunction with the ERP joint application. Use of this form when submitting ERP applications will help ensure that the Corps gets the information that they need to process federal permits. Including this information is expected to reduce the amount of additional information the Corps must request to process federal permits. Please join us as we discuss the form, where to find it, and how to submit it using the state agencies' electronic application portals.
